

NOAA WEATHER RADIO BROADCASTS

CITY	STATION	FREQUENCY	BROADCAST TIMES
Hawaii Kai, Oahu, HI	KBA-99	162.40 MHz	Continuously, 24 hrs a day
Kokee, Kauai, HI	KBA-99	162.40 MHz	Continuously, 24 hrs a day
Kulani Cone, Hawaii, HI	KBA-99	162.55 MHz	Continuously, 24 hrs a day
Mt. Haleakala, Maui, HI	KBA-99	162.40 MHz	Continuously, 24 hrs a day
Mt. Kaala, Oahu, HI	KBA-99	162.55 MHz	Continuously, 24 hrs a day
South Point, Hawaii, HI	KBA-99	162.55 MHz	Continuously, 24 hrs a day

These VHF-FM radio stations, locations shown on the map, are operated by the National Weather Service. This is a continuous broadcast, 24 hours a day. Broadcast recordings are updated every 1 to 6 hours and amended at any time that conditions warrant. The broadcast includes the latest coastal forecast and warnings for Hawaiian waters within 40 miles of the shorelines and inter-island channels. These products are supplemented by synopses, forecasts, and warnings for offshore waters within 240 nautical miles of the islands. Forecasts start with a statement describing any marine warnings in effect or a "No Warning" statement followed by a weather summary and forecast. Warnings are preceded by a 1050 Hz alert tone.

NOAA WEATHER RADIO BROADCAST TELEPHONE INTERCEPT

ISLAND	PHONE #

Kauai	808-245-2919

NWS PRODUCTS VIA WWW HF VOICE

The National Institute of Standards and Technology broadcasts a time and frequency service from stations WWV in Fort Collins, CO and WWVH in Kawai, Hawaii, commonly known to mariners as "Time Tick", used as an aid in celestial navigation. Included in these are hourly voice broadcasts of current highseas storm warnings for the Atlantic, Pacific, and Gulf of Mexico provided by the National Weather Service (NWS). For some further information on WWV, WWVH, and time signals worldwide, see NGA Publication 117 "Radio Navigational Aids".

WWVH (Hawaii)
FREQUENCIES : 2.5, 5, 10, 15 MHz (AM)
48 - 51 minutes past the hour Pacific highseas warnings

DIAL - A - BUOY

Dial-A-Buoy gives mariners an easy way to obtain reports via a cell-phone. Dial-A-Buoy provides wind and wave measurements taken within the last hour at National Data Buoy Center (NDBC) buoy and Coastal-Marine Automated Network (C-MAN) stations. The stations operated by NDBC, part of the National Weather Service, are located in the Atlantic, Pacific, Gulf of Mexico, and the Great Lakes. The Dial-A-Buoy service has since expanded to include stations owned and operated by other organizations including the United Kingdom Met Office and Enviroment Canada. To access Dial-A-Buoy, dial (228) 688-1948 using any touch-tone or cell-phone. For internet users, more information is at: <http://seaboard.ndbc.noaa.gov/dial.shtml>

BUOY AND C-MAN DATA AVAILABLE VIA E-MAIL (FTPMAIL)

Current buoy and C-MAN data is now available in a very compact form via http:, ftp:, or e-mail (FTPMAIL).

quit

WEATHER RULES FOR SAFE BOATING

Before setting out:

Obtain the latest available weather forecast for the boating area. The NOAA Weather Radio continuous broadcasts (VHF-FM) are the best way to keep informed of the expected weather and sea conditions. If you hear on the radio that warnings are in effect, don't venture out on the water unless you are confident your boat can be navigated safely under forecast conditions of wind and sea.

While afloat:

- Keep a weather eye out for: the approach of dark, threatening clouds, which may foretell a squall or thunderstorm; any steady increase in wind or sea; any increase in wind velocity opposite in direction to a strong tidal current. A dangerous rip tide condition may form steep waves capable of broaching a boat.
 - Check radio weather broadcasts for latest forecasts and warnings.
 - Heavy static on your AM radio may be an indication of nearby thunderstorm activity.
 - If a thunderstorm catches you while afloat, you should remember that not only gusty winds but also lightning poses a threat to safety.
 - stay below deck if possible.
 - keep away from metal objects that are not grounded to the boat's protection system.
 - don't touch more than one grounded object at the same time (or you may become a shortcut for electrical surges passing through the protection system).
- put on a life jacket and prepare for rough sea conditions.

NATIONAL WEATHER SERVICE RADIOFAX AND TEXT FORECASTS AVAILABLE VIA E-MAIL (FTPMAIL)

National Weather Service radiofax charts and text forecasts are available via E-mail. The FTPMAIL server is intended to allow Internet access for mariners and other users who do not have direct access to the World Wide Web but who are equipped with an e-mail system. Turnaround is generally in under 1 hour, however, performance may vary widely and receipt cannot be guaranteed. To get started in using the NWS FTPMAIL service, follow these simple directions to the FTPMAIL "help" file (11 bytes).
